**Title : Associate VMware Data
Center Virtualization**

Version : DEMO

1.Which two characteristics describe vSphere HA?

- A. vSphere HA restarts VMs if their host becomes isolated in the management network.
- B. In response to datastore accessibility failures, vSphere HA restarts VMs on unaffected hosts.
- C. vSphere HA performs load balancing across the hosts in a cluster to prevent resources contention
- D. By Keeping a secondary VM running at all times, vSphere HA protects VMs from data loss.
- E. When vCenter Server experiences downtime, vSphere HA restarts VMs on unaffected hosts.

Answer: A,B

2.Which file system protocol is supported by vSphere?

- A. NFS
- B. iSCSI
- C. SAN
- D. vSAN

Answer: A

3.Traditional operating systems allocate resources such as CPU and memory for applications installed on computers.

Which vSphere component schedules resource for virtual machines in a similar way?

- A. virtual Hardware
- B. vCenter Server
- C. ESXi Hypervisor
- D. VMware Tools

Answer: A,C

4.Which two storage protocols can a virtual infrastructure operator use to create a VMFS datastore?

(Choose two.)

- A. Fibre Channel
- B. NFS
- C. iSCSI
- D. CIFS
- E. SMB

Answer: A,C

5.An operator must deploy three virtual machines from a template named Win10-Template, and all three VMs must be configured with unique computer names.

Which action must the operator take to achieve this goal?

- A. Clone Win10-Template three times, and then change the computer name in each clone.
- B. Export Win10-Template to the local filesystem, and then change the computer name.
- C. Use a Windows 10 customization specification when deploying the virtual machines.
- D. Create the virtual machines using the New virtual Machine wizard.

Answer: C
